Certain statements contained in this presentation constitute "forward-looking statements." All statements other than statements of historical fact contained in this presentation, including, without limitation, those regarding Galane's results of operations, strategy, plans, objectives, goals and targets, and any statements preceded by, followed by or that include the words "believe," "expect," "aim," "intend," "plan," "continue," "will," "may," "would," "anticipate," "estimate," "forecast," "predict," "project," "seek," "should" or similar expressions or the negative thereof, are forward-looking statements. These statements are not historical facts but instead represent only Galane's expectations, estimates and projections regarding future events. These statements are not guarantees of future performance and involve assumptions, risks and uncertainties that are difficult to predict. Therefore, actual results may differ materially from what is expressed, implied or forecasted in such forward-looking statements.

Additional factors that could cause actual results, performance or achievements to differ materially include, but are not limited to: Galane's dependence on two mineral projects; gold price volatility; risks associated with the conduct of Galane's mining activities in Botswana; regulatory, consent or permitting delays; risks relating to Gal's South Africa exploration, development and mining activities being situated in two countries; risks relating to reliance on Galane's management team and outside contractors; risks regarding mineral resources and reserves; Galane's inability to obtain insurance to cover all risks, on a commercially reasonable basis or at all; currency fluctuations; risks regarding the failure to generate sufficient cash flow from operations; risks relating to project financing and equity issuances; risks arising from Galane's fair value estimates with respect to the carrying amount of mineral interests; mining tax regimes; risks arising from holding derivative instruments; Galane's need to replace reserves depleted by production; risks and unknowns inherent in all mining projects, including the accuracy of reserves and resources, metallurgical recoveries and capital and operating costs of such projects; contests over title to properties, particularly title to undeveloped properties; laws and regulations governing the environment, health and safety; operating or technical difficulties in connection with mining or development activities; lack of infrastructure; employee relations, labour unrest or unavailability; health risks in Africa; Galane's interactions with surrounding communities and artisanal miners; Galane's ability to successfully integrate acquired assets; the speculative nature of determining quantities and reserves; the risks of diminishing quantities or grades of reserves; development of Galane's exploration properties into commercially viable mines; stock market volatility; conflicts of interest among certain directors and officers; lack of liquidity for shareholders of Galane; risks related to the market perception of junior gold companies; and litigation risks. Details of certain of the risk factors relating to Galane are discussed under the heading "Risks and Uncertainties" in Galane's annual management's discussion and analysis for the year ended December 31, 2014, a copy of which is available on Galane's website. Management provides forward-looking statements because it believes they provide useful information to investors and readers considering their investment objectives and cautions readers that the information may not be appropriate for other purposes. Consequently, all of the forward-looking statements made in this presentation are qualified by these cautionary statements and other cautionary statements or factors contained herein, and there can be no assurance that the actual results or developments will be realized or, if realized, that they will have the expected consequences to, or effects on, Galane. These forward-looking statements are made as of the date of this presentation and Galane assumes no obligation to update or revise them to reflect subsequent information, events or circumstances or otherwise, except as required by law.

The forward-looking statements in this presentation are based on numerous assumptions regarding Galane's present and future business strategies and the environment in which Galane will operate in the future, including assumptions regarding gold prices, business and operating strategies, and Galane's ability to operate on a profitable basis.

Economic assessments in this presentation are preliminary in nature and include inferred mineral resources that are considered to be too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty that the economic assessments will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. There is no guarantee that any of the mineral resources disclosed in this presentation will be converted to mineral reserves. There is also no guarantee that any of the inferred mineral resources will be upgraded to measured or indicated mineral resources. Information of a technical and scientific nature that forms the basis of the disclosure in this presentation has been approved by Kevin Crossling, Pr. Sci. Nat., MAusIMM, MGSISA and Chief Geologist for Galane, and a "qualified person" as defined by NI 43-101.

Non-GAAP Measures

The presentation often refers to earnings from mining operations per ounce, total operating cash cost excluding royalties per ounce, direct cash cost per ounce, all in cash cost per ounce and cash flows from operations before working capital adjustments, all non-GAAP performance measures, in order to provide investors with information about measures used by management to monitor performance. This information is used to assess how well the producing gold mines are performing compared to plan and prior periods, and also to assess the overall effectiveness and efficiency of mining operations. Cash cost figures are calculated in accordance with the standard costs calculated by the Gold Institute, which was a worldwide association of suppliers of gold and gold products and included leading North American gold producers. The Gold Institute ceased operations in 2002, but the standard is still accepted in an observed standard of reporting cash costs of gold production in North America. Adoption of the standard is voluntary, and the cost measures presented herein may not be comparable to other similarly titled measures of other companies. Cash cost includes mine operating costs such as mining, processing, administration, and attributable realized derivative gain or loss, but are exclusive of amortization, reclamation, and exploration and development costs. Cash cost, cost per ounce of gold and other similar measures are measures of operating performance as attributable to the removal of excess waste in developing new resources. Operating cash cost excluding royalties is operating cash cost less royalties. These costs are then divided by the Company's ounces of gold produced to arrive at the cash cost measures on a per ounce basis. These measures, along with sales, are considered to be key indicators of a company's ability to generate operating earnings and cash flow from its mining operations. These measures of cash costs do not have any standardized meaning prescribed by IFRS and differ from measures determined in accordance with IFRS. They are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures are not necessarily indicative of net earnings or cash flow from operations determined under IFRS.
COMPANY OVERVIEW
A gold producer with management and assets in place to **triple production** and materially **lower production costs**.

**Mupane Mine**
- **Location**: North-East District, Botswana
- **Mine Type**: Open pit and underground
- **Mine Life**: 3+ years
- **M&I Resources**: 414,374 oz Au
- **Inferred Resources**: 219,765 oz Au
- **Forecast Production and AISC**: 34,804 oz Au/year ~US$1,050/oz Au

**Galaxy Mine**
- **Location**: Mpumalanga Province, South Africa
- **Mine Type**: Underground
- **Mine Life**: 10++ years
- **P & P Reserves**: 169,586 oz Au at 3.37 g/t Au
- **M&I Resources**: 602,696 oz Au at 3.01 g/t Au
- **Inferred Resources**: 886,199 oz Au at 3.40 g/t Au
- **Average Production and AISC phase 1**: 26,700 oz Au/year ~US$897/oz Au

Capital Structure

- Widely Held: 39.50%
- Mgmt/Insiders: 6.50%
- Ex Galaxy: 54.00%

Ownership Breakdown

- Outstanding options have a strike price of C$0.10 per share.
- Outstanding warrants have a weighted average strike price of C$0.05 per share.
- As of December 31, 2019

Galane Share Price Performance and Average Gold Price

- Share Price: C$0.12
- Basic Shares Outstanding: 223,240,910
- Stock Options: 12,300,000
- Deferred Share Units: 8,952,640
- Warrants: 32,083,866
- Fully Diluted Shares Outstanding: 276,577,416
- Basic Market Capitalization: C$24.0 million
- Cash: Approx US$3.8 million
- Debt: US$15.8 million

1 Outstanding options have a strike price of C$0.10 per share.
2 Outstanding warrants have a weighted average strike price of C$0.05 per share.
3 As of December 31, 2019.
MANAGEMENT TEAM

**Nicholas Brodie | CEO**
- Executive with 23 years experience with increasingly senior roles
- Previously with Glencore-Katanga Mining (DRC), Metallon Gold (Zimbabwe) and Copperbelt Energy Corporation (Zambia)
- Fellow member of the Chartered Certified Accountants and a B.Sc (Hons) Geography

**Wayne Hatton Jones | Chief Operating Officer**
- Mining Professional with 27 years experience in Africa, Asia and Europe
- Former GM (Goldridge), GM Metallurgy (Avocet), Process Manager (Randgold) and Metallurgical Manager (Harmony)
- B.Sc. (Witwatersrand), MDP (University of South Africa)

**Kevin Crossling | Business Development**
- Mining Professional with 14 years experience in progressively senior roles
- Former Operations Mgr (Allied Gold), Geology Manager (St Barbara), Principle Geologist (Geocross), Mineral Resource Manager (Pilanesberg)
- B.Sc. (Hons) Geology

**Gavin Vandervegt | Chief Financial Officer**
- Executive with over 15 years experience in mining in progressively senior roles
- Previously with Nautilus Minerals, Glencore-Katanga Mining (DRC), Roche Mining and Xstrata Coal (Australia)
- B.Com Accounting and Chartered Accountant

**Cedric Sam | General Manager Mupane**
- 17+ years experience in Africa as a mining engineer
- Previously with Tati Nickel, African Copper and Botswana Department of Mines.
- B.Sc. Mining Engineering from Queens University in Kingston, Ontario

**Ravi Sood | Chairman**
- Investor with extensive capital markets experience
- Founder of Navina Asset Management Inc. (Canada)
- Founder of Feronia Inc, a plantation operation (DRC) and Buchanan Renewables (Liberia)
- Founder of Jade Power, an emerging markets renewable energy producer
MUPANE GOLD MINES
Botswana
2011 – IamGold sells to Galane Gold

- A non-core, high cost ($1400+), short life (2013) mine owned by IamGold Corp.
- Galane saw the potential to transition to a low cost underground operation.

2011-2015 – Optimisation and Transition to Underground

- Changed senior management team to reflect challenges
- Changed focus to mining based on a cost per ounce
- Transitioned from open pit mining to underground at Tau
- Operated as a mature mine replacing resources as mined
- Automated and upgraded the plant to reflect the change in metallurgy

2016 onwards – Cash Flow and Extending Life of Mine

- Proved extension of Tau at depth
- Commencing transition to underground at Golden Eagle
- Transitioned skills to local staff so that management team could move to new projects
- Unlocked the exploration potential with a joint venture with B2 Gold
A joint venture between Galane and B2 Gold owns ~90% of the highly prospective, 1,200 km² Tati Greenstone Belt area

- Earn in Agreement signed with B2 Gold on Prospecting Licences for extensive exploration of the prospecting licences
  - B2 Gold to spend $4m over 3 years for 70% of the JV
  - Targeting a 1moz+ resource
  - $1m spent to date and option exercised for further two years
- Over 120 exploration targets have been generated from soil geochem and aero-magnetics work carried out
- Mupane will continue to focus on exploration on mining licences which are not part of the JV, including Tau Deeps
OVERVIEW OF THE GALAXY MINE

Location
- 8 km west of the town of Barberton and 45 km west of the provincial capital of Nelspruit in the Mpumalanga Province of South Africa
- 58.6 km² property is part of the prolific Barberton Greenstone Belt

Operating History
- Gold prospecting dates back to the 1880s, while production dates back to 1908
- Mine was placed on care-and-maintenance in 2007
- Approximately 1.3 million oz Au has been produced to date

Reserves & Resources (as of Aug. 31, 2015)
- P&P Reserves: 169,586 oz Au at average grade of 3.37 g/t Au
- M&I Resources: 602,696 oz Au at average grade of 3.01 g/t Au
- Inferred Resources: 886,199 oz Au at average grade of 3.40 g/t Au

Mine Plan
- 21 east-west trending gold ore bodies and four prospects at 600 - 2,000 m depth
- Existing infrastructure includes adit access to all mineralized bodies and a functional shaft to 700 m depth
- Mine plan based on fully mechanized long hole stopping and cut-and-fill mining
- Contractor mining planned for first 3 years followed by owner-operated mining starting in year 4

Processing Plant
- Conventional crush, mill, and flotation
- Current capacity of 500 tpd and expanding to 1,500 tpd by May 2020
- Producing a concentrate with the high sulphur content making it attractive to roasters.
- Recovery of 75% from sale of concentrate
- Existing BIOX plant could be recommissioned once in steady state for 90% recovery

Mine Life
- 10++ years (dependent on mine plan selected)

Phase One Production Forecast as per Technical Report
- Average of 26,700 oz Au/year over 10+ years
- Average AISC of approximately < US$897/oz Au
GALAXY CURRENT STATUS

2015 – Acquired
- In care and maintenance
- Galane saw the potential to transition to a low cost mechanized underground operation producing concentrate.

2015-2018 – Optimisation of Plan and funding
- Designed new 50,000 tonne per month plant with Logiproc
- Produced detailed mine plans for the two widest ore bodies with Bara Consulting
- Produced a bankable in house study and obtained financing from Barak Fund to commence operations in 2019

2019 – Phase 1 production
- Commenced production and cash positive from operations in November 2019
- Mining in Princeton and washing high grade tailings
- Targeting production of 26,000 ounces at an all in cost of less than $900 per ounce

2021 – Phase 2 expansion
- Commenced Preliminary Economic Assessment to support Phase 2 expansion to potential 60,000 ounces per annum production.
- Planning to commence Phase 2 in 2021
GALAXY MILESTONES TO FULL PRODUCTION PHASE 1
SUBJECT TO COVID-19 RESTRICTIONS

- 22 Level Galaxy Portal and 17 Level Princeton Portal completed
  - February 2019

- Old Mill Sands Sluicing commenced
  - April 2019

- 15,000t per month feed rate through processing plant
  - May 2019

- Underground Ore added to processing feed
  - June 2019

- Princeton First Ore produced
  - June 2019

- Commissioning of new 50,000t per month plant
  - May 2020

- Princeton Decline & Galaxy Development start
  - February 2019

- 22 Level Development to be started at Galaxy ore body
  - July 2020

- Galaxy First Ore produced
  - Sept 2020

- 15,000t per month feed rate through processing plant
  - May 2019

- 22 Level Development through Giles orebody
  - January 2020

- Phase 2 PEA completed
  - May 2020

- Galaxy Ramp and Decline start
  - Aug 2020

- Phase 2 development commenced
  - 2021

- Phase 2 development commenced
  - 2021

- Phase 2 development commenced
  - 2021

- Phase 2 development commenced
  - 2021
GALAXY MINE: LOCATION

Adjacent Mines: Mines located 30 km to 50 km from the Galaxy properties

Pan African Resources’ Barberton Gold Mine
- In fiscal 2019, produced 99,363 oz Au at a cash cost of US$927/oz Au
- Use an oxidization step
- JORC resource of 4.0 million oz Au at a grade of 4.19 g/t Au

Vantage Goldfields’ Barberton Gold Operations
- Technical report supporting annual production of approximately 30,000 oz Au per year at an average cash cost of approximately US$861/oz Au (1)
- JORC resource of 1.9 million oz Au
- In Business rescue

(1) During its last year of production.
Galaxy Mine: Exploration Upside

- Target 6 of the 21 recognised ore bodies
- Exploration will focus on extensions at depth
- Main focus will be on Galaxy and Princeton which form part of the current mine plan

Excellent potential to expand gold resources to over 4.0 million oz
SUMMARY
REASONS TO INVEST

- Low cost production growth from Galaxy
- Highly experienced management team
- Operating improvements at the Mupane Mine
- Re-rating potential and leverage to rising gold prices
- Substantial exploration upside

Re-rating potential and leverage to rising gold prices
